FEATURES

Auto color calibration

In order to save time of installation and maintenance experienced by previous extra camera solution, HYUNDAI IT's auto color calibration makes adjustments to automatically ensure uniformity across all video wall displays embedded with calibration chipset. This new color calibration procedure enables to keep consistency of video wall display's operational lifespan.

Ultra Narrow Bezel

Combined with the cutting edge function, Ultra narrow bezel design ensures a maximum screen area with unified images and a minimum of viewable interruptions.

Easy operating OSD menu, Remote control

In order to setup a multi display wall, the single units are linked by a daisy chain connection over DP. The configuration of each display can be easily set-up over the on-screen menu or the RS232C interface.

4K Daisy Chain

No more peripheral devices needed to configure 4K native video contents, HYUNDAI IT's display enables high-end 4K @60Hz video contents simply loop through the daisy chain without image distortion.
